GEOG215 Group Case Study #1 Group Members: ______________________________

Visit a local grocery store (Piggly Wiggly, Pick'n Save, Jewel Osco etc.) with your teammate. Pick 10 kinds of produce (vegetables and/or fruits) and 10 kinds of processed and packaged food (e.g. cereal, juice, sausage…), mark down their corresponding production location (what country or which state in the U.S.) in your notebook first and then record them in ***a spreadsheet*** (produce/product, location produced). On the given ***map***, represent these locations using two different-colored symbols (one for produce, and one for processed and packaged food). **Turn in your finished map and printed spreadsheet in class Thursday 10/11.**
